CANADIAN WATER SAVINGS & THE ST. REGIS TORONTO

PERFECT WATER VALVE

A PARTNERSHIP IN SUSTAINABLE WATER INNOVATION

Canadian Water Savings is pleased to announce a successful collaboration with The St. Regis Toronto, a property globally recognized for its luxury hospitality and unwavering commitment to sustainability. This partnership reflects the shared pursuit of excellence and environmental stewardship that defines both organizations.

The project commenced with a thorough technical evaluation of our Smart Valve™ technology, led by Priyan Jayetileke, Director of Engineering at The St. Regis Toronto. His expertise ensured our solution met the exacting standards of Marriott International, providing a strong foundation for trust and implementation.

"It has been a pleasure partnering with CWS Directors Jordan Hutchinson and Peter Chochua ever since their outstanding January 2024 presentation to the H.E.A.T. members at The St. Regis. The CWS Service Team carried that same professionalism through installation—finishing the Smart Valve™ setup in under an hour—and Jordan and Peter have provided consistent follow-up support and collaboration ever since. Now, more than a year later, the results speak for themselves: year-over-year savings of $49,889, representing 20 %+ in water-cost reduction."

— Priyan Jayetileke, Chief Engineer, The St. Regis Toronto

Equally vital was the involvement of the hotel's Finance team, whose rigorous financial assessment and advocacy for our proposal played a pivotal role in establishing Canadian Water Savings met the approval of Marriott Hotels.

With the successful implementation of the Smart Valve™, The St. Regis Toronto now stands at the forefront of sustainable water management in the hospitality sector—a testament to what is possible when technical innovation meets operational excellence.

Canadian Water Savings remains committed to advancing smart, sustainable solutions that empower our partners to achieve measurable environmental and economic impact
